

Solar Flex for irrigation

How farmers are cutting their energy costs in half for \$0 capital.

Solar Flex for irrigation

Solar has always worked well to reduce electricity costs when running irrigation pumps.

The problem has been that the return on investment depends on how many days a year you run the pump. It doesn't always make sense to pay for a solar system.

Solar Flex a gamechanger

In September 2017 the QLD government announced the Solar Feed in Tariff eligibility had increased to a 30kW inverter capacity.

This is great news because solar will reduce the cost while you are pumping and you will also receive the solar feed in tariff of 10.1c/kWh when you are not pumping.

Is solar flex right for you?

With Origin's [Solar Flex](#) you can go solar without paying for the system. Farmers can buy the energy from the solar system at large discounts to the standard grid rate.

“This is such a huge boost for farmers to reduce their daily energy bills without having to use capital on a solar system.”

John Horan – Group Manager, Horan & Bird

Solar Flex

The new way to go solar

Greater certainty on energy costs

Lock in a low solar energy rate

\$0 capital investment

No capital investment for the solar system* means you can save from day one

Maintenance included

We will maintain, manage and monitor the system

Sustainability

Demonstrate to staff and customers your commitment to the environment

*You may incur other non-system costs but these will be quoted or listed as exclusions prior to sale.

Switching to solar doesn't require a large upfront capital investment. With our Solar Flex, you'll be able to leave the ownership and upkeep of your solar system to us – which means you can start saving from day one, without needing to buy the system or pay for ongoing maintenance costs.

If you choose Solar Flex, we'll install a solar system that's tailored to your roof and electricity consumption habits – and your business will have access to a new low solar electricity rate for any electricity the system produces during the day.

You'll sign a 10 or 15 year agreement to purchase the energy generated by the system, with certainty around the solar energy rate for the full term of the agreement. And at the end of the term, you can buy the system or continue on with the agreement.

ENERGY CONSUMPTION

CUMULATIVE SAVINGS WITH SOLAR FLEX

Go solar upfront

With our outright purchase solution

If you're looking to purchase a solar system outright, we can design and construct on for you – and we'll hand over the ownership to you. You'll still have the support of our experts throughout the entire process, from installation and grid connection application, to meter exchange and rebate facilitation.

And, if you're concerned about paying for the system upfront, we offer payment options to help pay for the system.
